Gujarat, India

PROFILE

Python developer at the Cyber Centre of Excellence, Gujarat State. By day I build the analysis and automation tools investigating officers use to unpick large-scale financial fraud. The rest of the time I design and ship websites, dashboards and mobile apps for businesses that need software that actually earns its keep.

EXPERIENCE

Cyber Centre of Excellence, Gujarat State

Data Analytics & Software Development
December 2025 — present

- Built 75+ internal applications for cyber crime data analysis, reporting and workflow automation, in use by officers across Gujarat.
- Supported investigating officers in tracing large-scale financial fraud and in live fund-recovery work.
- Automated recurring NCRP and Samanvaya portal operations that previously consumed thousands of hours of manual entry.
- Wrote pipelines handling Excel and CSV files running into millions of rows, using vectorised pandas, fuzzy column detection and batched MySQL writes with checksum verification.
- Replaced manual compilation of investigation reports and case summaries with automatic Excel, CSV and PDF generation.

Independent client work

Design & Development
Ongoing, alongside

- Websites, CRMs, quotation engines and Android apps for studios, manufacturers, travel agencies and food businesses.
- End-to-end delivery: positioning, design, build, deployment, and the admin tooling the client runs it with.
- Clients across Ahmedabad, Gandhinagar, Palanpur and beyond.

SELECTED PROJECTS

HIGHLIGHTS

75+
internal applications built for cyber crime analysis and automation

33
districts of Gujarat covered by the district-wise matching engine

TECHNICAL SKILLS

- Languages**
Python, JavaScript, TypeScript, Java, SQL, HTML, CSS
- Data & analysis**
pandas, NumPy, RapidFuzz, OpenPyXL, XlsxWriter, Matplotlib, Plotly, Altair, NetworkX, Power BI, Jupyter
- Backend & apps**
Streamlit, Flask, FastAPI, SQLAlchemy, Socket.IO, MySQL, PostgreSQL, Prisma, Node.js, ReportLab, python-docx
- Frontend**
Next.js, React, Tailwind CSS, GSAP, Lenis, Framer Motion, Recharts, Canvas & WebGL
- Automation & ops**
Selenium, Scheduled jobs, PDF & Excel reporting, Git, Vercel, Hostinger, GitHub Actions, pytest, Hypothesis
- Mobile**
Android (Java), Server-backed sync, Play-ready builds

A 53-module analysis suite that turns fifty raw bank statements into a ranked, court-ready picture of where the money went. Built for investigating officers, in daily use across Gujarat.

[dailyreport-v2.streamlit.app](#)

Account Summary Control Room Python · Flask · pandas · Excel automation

Follows a disputed rupee through six or more layers of accounts and draws the tree: who received it, where it was cashed out, what is frozen and what is still moving.

NCRP & Samanvaya Automation Python · Selenium · scheduled jobs

A set of bots that perform retrieval, filing, cross-checking and bulk updates on national cyber crime portals end to end — removing thousands of hours of manual entry a year.

Radhe Design Studio HTML · CSS · JavaScript · PHP · MySQL

An architecture practice deserved more than a template. A drafting-sheet design system, an in-house 360° panorama viewer, and an admin CRM that tracks every fitting in every project through to handover.

[radhesignstudio.in](#)

Veer Aluminium & Fabrication Next.js 15 · React 19 · TypeScript · Prisma

A fabrication firm that used to quote by phone now quotes in the browser: pick product, material and dimensions, watch the price build itself, and download a GST-inclusive PDF quotation on the spot.

[veeraluminium.vercel.app](#)

Imperial Craft Studio Design-led build

Of all the client work so far, the one I am most satisfied with. Brand and portfolio site, designed and developed start to finish.
